Theme Set-Up Instructions

1. Download website theme to your computer. Be sure to take note of where on your computer the file is being downloaded to. For example, is the file automatically downloading to your download files, picture files, document files etc..? Knowing where the file is being downloaded in the beginning will be very helpful for a smooth theme set up.

2. Next after file is downloaded go to the downloaded file, click on it to extract the files from the zip file.

3. Then go to your text editor and open it up, on the top left side click the File tab, it should open to a list of options click open folder, this will open your text editor to the files on your computer, select the location on your computer where the theme file has been downloaded and extracted from.

4. After the file is located click on the file to open it inside your text-editor.

5. Before proceeding to make your edits to the template inside the text editor, leave text editor open. Make sure you view the template first before adding any new content to the theme.

6. To view theme go back to downloaded template file double click the file to open it ,then double click the file that says index to open the theme in your computer browser.

7. While looking at the theme on your browser take note to the number of pictures you will need to add to the image folder in order to change the images in the theme.

8. Next up, after you have did a count of the amount of pictures you want to change, locate the pictures you will be using click to copy the image, go back to downloaded theme file ,click folder that is labeled img or image and click to paste all your images inside the image folder.

9. Now go back to opened theme on text editor and proceed in adding your textual content and images in the designated areas.

10. Be sure to save your edits frequently and refresh your browser to see the changes frequently.
